# "SNAPS" For Greenhouse Forcing

Snapdragon being one of the leading Florist Greenhouse crops, we have followed very closely the development of the Winter Flowering or Forcing type and offer the following approved varieties.

Greenhouse Snapdragons are one of the major crops with the average grower. They are varieties which have been developed through breeding, plant selection and first cross hybrids. There are mainly three classes, early, intermediate and spring flowering. The early varieties will flower much better in the north during winter months under low light intensity and low temperatures, whereas planted in the south with more light they set buds earlier, and do not make as large a spike. Second, early or intermediates are fairly good for winter, but better after "Mums", and the late or spring flowering varieties which are stronger growing, and more vegetative, should be used only after "Mums" for their larger spikes. First sowings are generally made between June 10th and July 10th, and selection of varieties made according to locality, and climatic conditions. Sowing of seed in summer should be done in the coolest, and shadiest spot available, and with good circulation of air. The soil for growing should be porous, and well drained. Raised benches are preferable to ground beds for winter crop. High nutrition, especially nitrogen, and water combined during the dark days should be avoided as the results will be soft growth, and off-colored shatterly flowers. For spring flowering after "Mums" when later and stronger growing varieties are used, ground beds may be used to better advantage, for with lengthening days and higher temperatures there are better growing conditions. Early varieties usually are planted 7 x 8 in. and the later and heavier sorts 8 x 8 in.

In the early pink and rose shades, **Christmas Cheer** is the finest rose pink. **Dorcas Jane**, illustrated in color on the cover, is a beautiful light pink, slightly larger flower than Mary Ellen and a little earlier. Has a clean habit of growth, and fine long spike. **Maryland Pink** and **Mary Ellen** are excellent light pinks. **Better Times** is a deep American Beauty rose. These five are first cross hybrids from known parentage, excellent early varieties and croppers. **Yoder's No. 33** a medium rose pink of Mary Ellen type. **Rose Pink Cheviot**, **Radiance** and **Ball's Early Pink** are also in the early pink class.

In the next or intermediate type, the most popular are the old standby, **Cheviot Maid** Reselected, **Delworth Supreme**, a Cheviot Maid selection, **Rose Queen**, **Gilbert's Pink Supreme**, **La France** and **Daybreak**. Most of this group can be planted for winter flowering but the early sorts are more productive in our latitude during the dark winter days.

For after "Mums" **Peggy Schumann** is a fine rose with heavy stems and fine spikes, as is **Light Pink Peggy**, a new comer this year. **Schaffroth's Pink** is another. **Marie Louise** and **St. Louis Pink** are fine light pinks. **America**, **New Cincinnati** and **Terry's Surprise** fit in here.

In the early whites, **Koester's White** and **White Wonder Improved** are early pure whites, the latter slightly heavier. **Margaret**, a fine winter blooming white, of fine long spike having same type growth as **Mary Ellen** pink, only slightly earlier and closer set ivory white spike. **Schlegel's White** is another early white with a fine tapering spike. Next in earliness are **Feist's White**, a true sport of **Cheviot Maid Pink**, and **Peace**, a fine pure white, larger than **White Wonder**. **Lucky Strike Improved**. Popular pure white, grows three to four feet with full spike of flowers. Blooms earlier than the original; does not drop or shatter. Grown by many for early, midseason and late. See illustration in color or cover page. **Early Westover Fringed White** is a selection of this late sort. For after "Mums" or Spring Flowering, **Marion White**, **Snow White**, **Schaffroth's White**, and the new comers **White Peggy Schumann** and **Junglewood White** will find favor.

In the yellows the earliest are **Yellow Wonder**, **Ceylon Court**, which is heavier and darker, and **Goldie** which resembles a shorter Ceylon Court. **Schlegel's Yellow** produces a good spike, although very light in color. **Frances Schlegel** is a much deeper yellow. **Gilbert's Yellow**, illustrated in color on the cover and another new comer, fits in here and has a sturdy stem and free branching habit, topped by a quality spike. **Carol Jean** has a larger flower and is slightly lighter than **Ethel** which remains the most popular yellow on the market although a little later. To follow "Mums" are **Sunray**, **Yellow Peggy Schumann**, **Coate's Yellow**, **Klondyke Supreme** and **Junglewood Yellow**, a new variety.

In the bronzes, the earliest are **Lady Dorothy**, a new reddish bronze which is finding favor, **Suntan** and **Sunlite**, the latter being lighter in color. **Afterglow**, which is slightly later and heavier, still is very popular. **Gilbert's Bronze Beauty** fits in here with its long spike. **Bronze Christmas Cheer**, not as early as its name implies, is an open pollinated variety of heavier growth. **Talisman** a nearly all double, slight of growth, is a retail novelty, an early bloomer. For after "Mums" there are **Glorious**, **Ideal Improved**, **Miss Wooster** and **Bronze Peggy Schumann** this year.

For after "Mums", **Velvet Supreme**, a scarlet crimson, and longer spiked **Velvet Beauty** are popular, being joined by a new comer, **Schumann's Velvet Red**.

In the lilacs or lavenders, **Windmill Lilac** is the earliest although not a winter producer. **Bertha Baur**, **Ball Lavender** and **Schumann's Lavender**, the most popular variety, are later and to be planted after "Mums" as probably all in this class should.

**Due to greatly increased costs we regret that we cannot make group prices or quantity discounts on Snapdragons.**

Varieties followed by (X) are sold in 1/2 trade pkts. at 60c each. Varieties preceded by a star (\*) are best for early winter flowering.

CALCEOLARIA Hybrida Grand. Triumph

CALCEOLARIA Flower Cloud

CALCEOLARIA Grandiflora Extra Choice Mixed

## Vaughan's Calceolaria

### These Make Wonderful Plants for Easter or Mother's Day

For Calceolarias, use a mixture of loam, leafmold and sharp sand. This mixture is suitable both for the seed pans and the pots into which the seedlings, when ready, should be planted. Perfect drainage is important. Calceolaria seed being very fine the seeding should be done with great care and it is suggested that one use a sheet of white paper on which a tablespoon of white sand is distributed. Then shake the seed on top of this sand and mix thoroughly. Then, sprinkle this mixture on the soil of the seed pan, dusting surface with a little fine sand, cover with a sheet of glass and place in the shade. For moisture, immerse the pans in water. As the seedlings come up lift them carefully when quite small and prick them off into a flat allowing two inches square for each plant. It is important that the leaves of one plant should never be allowed to overlap those of another or decay will probably result. When established in pots shift them into the larger size. At the last shift give them some manure water, not too strong, about once a week.

BEET, CROSBY'S EGYPTIAN

## VEGETABLES FOR SUMMER PLANTING

Every florist who has available land should grow vegetables for the market this summer, for two reasons:

He will get top market prices, and he will be contributing an essential service to the country in helping to lessen the world-wide food shortage.

If you have a location for a roadside market near your plant, your vegetables can be sold at retail, together with any flowers which you may have in surplus.

Following are varieties which we recommend for summer sowings:

Sweet Peas Lend Themselves to Graceful Basket Arrangements

We recommend sowing perennial seeds in spring. Seed germinates better in the cool weather than in the heat of mid-summer, and the long growing season produces larger plants that winter over more successfully.

# Seeds of Biennials and Hardy Perennials

Perennials fill a large and interesting place in the operations of an up-to-date florist establishment. Some are as easily raised as annuals; quite a few may be forced; others make fine pot plants; and many furnish splendid cutting material. The rock garden requirements absorb all the low-growing varieties and the florist with his eye to the future will devote considerable space to perennials of all kinds. They require little heat, if any, and not much care.

## SEED GERMINATES SLOWLY AND IRREGULARLY

Aconitum, Anemone, Clematis, Delphinium Cardinale, Delphinium Nudicaule, Dictamnus, Dielytra, Iris, Phlox Decussata, Primulas Trollius and nearly all Alpines.

### POPPY

Cut newly opened flowers either early in the morning or in the late evening and immediately (within five minutes of cutting) burn the ends of the stems at the gas range or electric range for a depth of two inches. Burn them well until the ends are charcoal and glow red when taken from the fire. Then put them in fresh water and your Poppies will last from three days to a week in the house, or you can put them in full sun and they will stand up two or three days, or until the petals drop, without wilting.

# Bulbs for Mid-Summer and Early Fall

## White Calla

(Aethiopica) Ready in September

Callas being natives of swampy regions grow to best advantage where there is an abundance of moisture, and are therefore very difficult to handle in the curing. Some growers practice **premature cutting off the tops**, expose bulbs to the sun, in order to make early shipment.

Our stock is **thoroughly cured in the ground** and dried carefully before they are packed. This means **later delivery** but better results can be obtained from such bulbs.

We caution forcers of Callas to water this stock sparingly after planting because Calla bulbs store up considerable moisture.

## Sodium Selente Makes Plants Poison Insects

Sodium selenate, which Dr. W. E. Blauvelt of Cornell University told a florists' meeting at Cornell University, "is out of the experimental stage," when applied to the soil in a greenhouse bench is absorbed by the plants, and makes them poisonous to insects.

Not all insects are affected. It works best with soft plants like chrysanthemums, carnations, gladioli, cyclamens, saintpaulias, etc., and has not been found entirely effective on woody plants. It kills red spider and aphid on chrysanthemums and carnations, cyclamen mites on chrysanthemums and saintpaulias, foliar nematodes and midge on chrysanthemums.

Complete instructions for use are sent with the material and must be followed closely. To emphasize the need for care in the use of this new material, we ask all purchasers to sign a release to us of all responsibility for any damage which may be caused. Two forms are available.

**Pure Sodium Selenate** is a granular powder, very concentrated: One pound treats 1,800 square feet of bench area. This material is completely water-soluble. 100 grams (makes 1 gallon) prepaid \$1.50; per lb., \$4.00. By express, charges collect.

**P-40 is two per cent sodium selenate** and ninety-eight per cent carrier (superphosphate in the present material). It is a dilute material. Three pounds treat only 100 square feet of bench area. 3 lbs., \$1.50 prepaid; 25 lbs., \$4.25; 50 lbs., \$8.00; 100 lbs., \$14.00, by express, charges collect.

## D. D. T.—Yamtox

Use of DDT alone seems to have a tendency to increase the infestation of other insects that it does not control. This may be due to killing off desirable parasites, or freeing them from competition. DDT Yamtox contains the full complement of rotenone necessary for the control of red spiders and other mites, thrips and aphids. The incorporation of 5% DDT in it widens its range of use to the satisfactory control of tarnished plant bug and leaf rollers. Where the plants are easily damaged, or where it is desired to spray open flowers of mums, or to dip the entire plant, as in the case of cyclamen mite, Yamtox DDT sure fits the bill.

Yamtox is a concentration of the active principles of the Yam Bean (*Pachyrhizus erosus*). The Yam Bean affects many insects in much the same manner as Rotenone and seems to be the nearest approach to it. It has been used for centuries in the control of pests on vegetables in some parts of China. In Yamtox the toxic effects of the bean are extracted to make them as available as possible. They are further strengthened by chemicals of proven toxicity. Especially recommended for the control of Plant Lice, Red Spider, Thrip, Cyclamen Mite, Cabbage Worms, and most other insects that are controlled by Rotenone. It is very mild upon Plant Growth and safe to use even on most tender plants. Price per gallon, \$12.00; case of 6-1 gallon cans, \$11.00 per gallon; 30 gal. drum, \$270.00.

## D. N. DUST No. 12

To control Red Spider Mite and Thrips on Roses, Calla Lilies, Snapdragons, Gardenias and Carnations. Control should be obtained before blooming period. If an application is necessary during bloom-time all marketable blossoms should be cut before dust is applied.

Packed in 10-lb. bags each, \$4.50; per case of 5 10-lb. bags, \$20.00.

## D. N. SULPHUR DUST No. 10—For Carnations

Effectively controls Red Spider Mite, Thrips and Rust. One pound of dust will cover from 400 to 800 square feet of bench space, depending on size of plants effective both in field and greenhouse. Non-injurious to plant foliage. Like D. N. No. 12 should be applied before blooming period. Effective under varied conditions of temperature and humidity. Put up in 10-lb. pkgs. each, \$3.50; per case of 5 10-lb. pkgs., \$16.25.

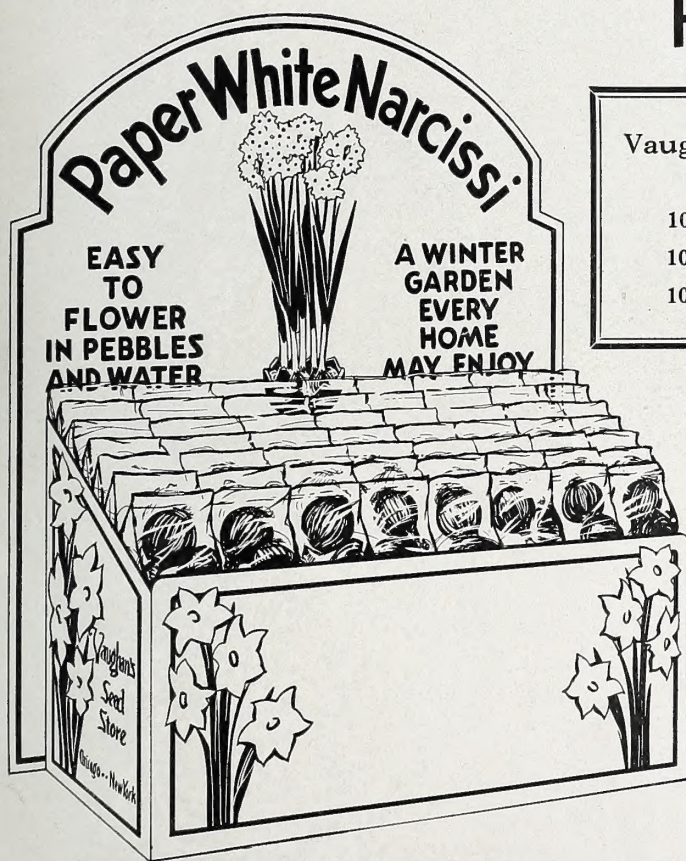

## TARTAR EMETIC

## STIMROOT

An improved rooting compound which has been developed after extensive testing by a well known research organization. It contains several different hormone-like chemicals in sufficient quantities to produce root stimulation in the hard type of cuttings, and still is safe to use on the softer, more easily injured plants. Also contains a fungicide that helps retard the development of many kinds of fungi that contribute to the rot of cuttings while in the cutting bench. It is so formulated that a small amount of dust will effect a complete and even coating on each cutting. In this way a pound of dust will go further. Price, ¼ oz. packet retails at 25c, per dozen, \$1.80; 2 oz. retails at \$1.00, per dozen \$7.20; 1 lb. retails at \$5.00; each \$3.25; six for \$18.00.
